

Filtration socks (combo bags)

Filtration socks are intended to be used for filtration of aluminium all through melting operation.

While applying these filtration socks there are no special additional frameworks needed.

Filtration socks assure smooth flow of the metal. Filtration socks can be manufactured in various sizes and it is possible to incorporate metal threads therein if required.

Product are produced accordingly to instructions and technical specifications of customers.

Design

Each combo bag is design specially for our customer, according to technical requirements and specification. As soon as first prototype is confirmed by customer we are ready production. Our advantage is our experienced tailors, quality and ability to adapt to the specifics of production.
