

Die cutting

Accordingly to instructions and technical specifications of customers we manufacture various formed patterns from glass fibre (fabric, netting) materials, needled mat, ceramic wool etc. Die cutting with various production equipment - as presses and cutting plotters, we ensure accurate product size and high quality.

Supervisors and drawing engineers

Our technicians and skilled workers supervise all stages of the production cycle providing a complete "turn key" service worldwide.

Both - planning and design stages are regularly carried out using our CAD oriented programmes based on information delivered from the one of the following sources: on site surveys carried out by our specialist teams; 2D scale drawings provided by our customers; 3D graphic models of turbines (made by our technicians or provided by customer).

Distribution

We offer our customers a wide range of raw material, for example - fiberglass mats, fabrics (loomstate and coated with PTFE, PU and Silicone), e-glass, silica, ceramic and rockwool, As well as meshes, yarns and metal accessories.
